PROFILE

Software Engineer with hands-on experience in backend development, system design, and software architecture. Experienced in designing and building REST APIs and microservices using Python, JavaScript, Node.js, and MongoDB, with a strong focus on scalable and maintainable systems. Strong foundation in software engineering, operating systems, computer networks, and algorithmic problem solving, supported by a B.Sc. in Computer Science with a 95.8 GPA and current M.Sc. studies in Machine Learning & Big Data.

EDUCATION

M.Sc. in Computer Science – Machine Learning & Big Data 10/2026 – Present
The Open University of Israel

B.Sc. in Computer Science 04/2024 – 09/2026
HIT - Holon Institute of Technology

- **GPA: 95.8**
- **Dean's List** (2024–2025) — Recognized for academic excellence and consistent high performance.

PROJECTS

AI-Powered Job Scanner

Technologies: Python, Groq (Llama 3.1), BeautifulSoup, GitHub Actions, Pytest

- Built an automated pipeline that scrapes Israeli job boards twice daily, evaluates listings against a parsed CV using an LLM, and delivers a ranked digest of matches by email.
- Designed a rule-based pre-filter for region, seniority, and experience before LLM evaluation, reducing unnecessary API usage and staying within free-tier rate limits.
- Implemented batched LLM scoring with retry and quota-exhaustion handling, plus persistent deduplication to prevent listings from being evaluated or sent more than once.
- Modularized job-board scrapers behind a shared interface and added automated tests to support reliable extension to new sources.
- Deployed the system as a serverless GitHub Actions workflow with external scheduling and secret-based credential management.

Expense Tracker Microservices Platform

Technologies: JavaScript, Node.js, Express.js, MongoDB Atlas, Mongoose, REST APIs, Postman

- Designed and developed a microservices-based expense tracking platform featuring an API Gateway and independently deployable services.
- Designed and implemented RESTful APIs for user management, expense tracking, reporting, and request logging.
- Integrated MongoDB Atlas using Mongoose and validated API functionality with Postman and Pytest.
- Deployed the application to Render for cloud-hosted testing and access.

SKILLS

Programming Languages

- Python, JavaScript, C, SQL

Backend & Systems

- Node.js, REST APIs, Microservices

Databases

- MongoDB Atlas, MySQL, Mongoose

Cloud, AI & Tools

- Claude Code, Git, GitHub, Postman, Pytest, AWS, Render
